

1) DBMS, Schema, Instance, Data Model, ER Diagram, Entity, Attribute, Relationship

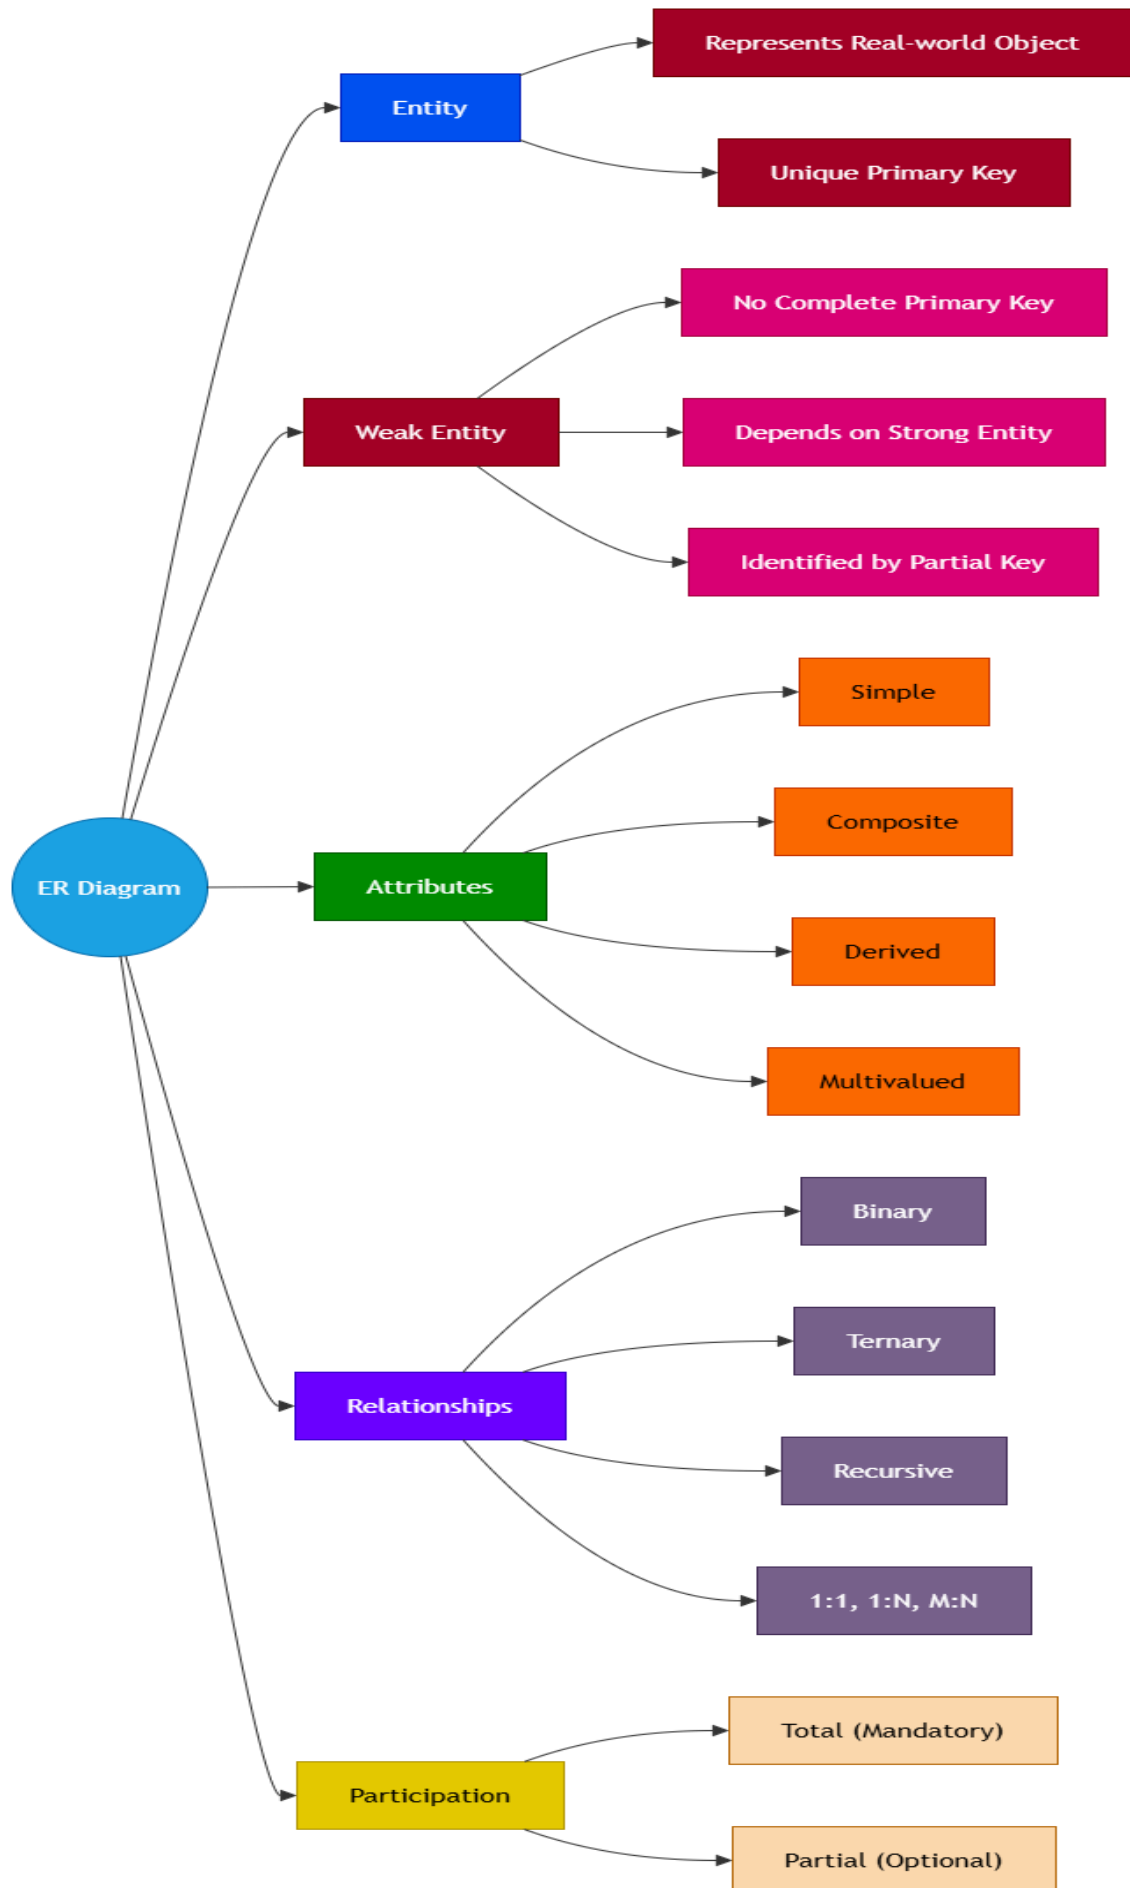

2) ANSI/SPARC Three-Level Architecture — Data Independence at Each Level

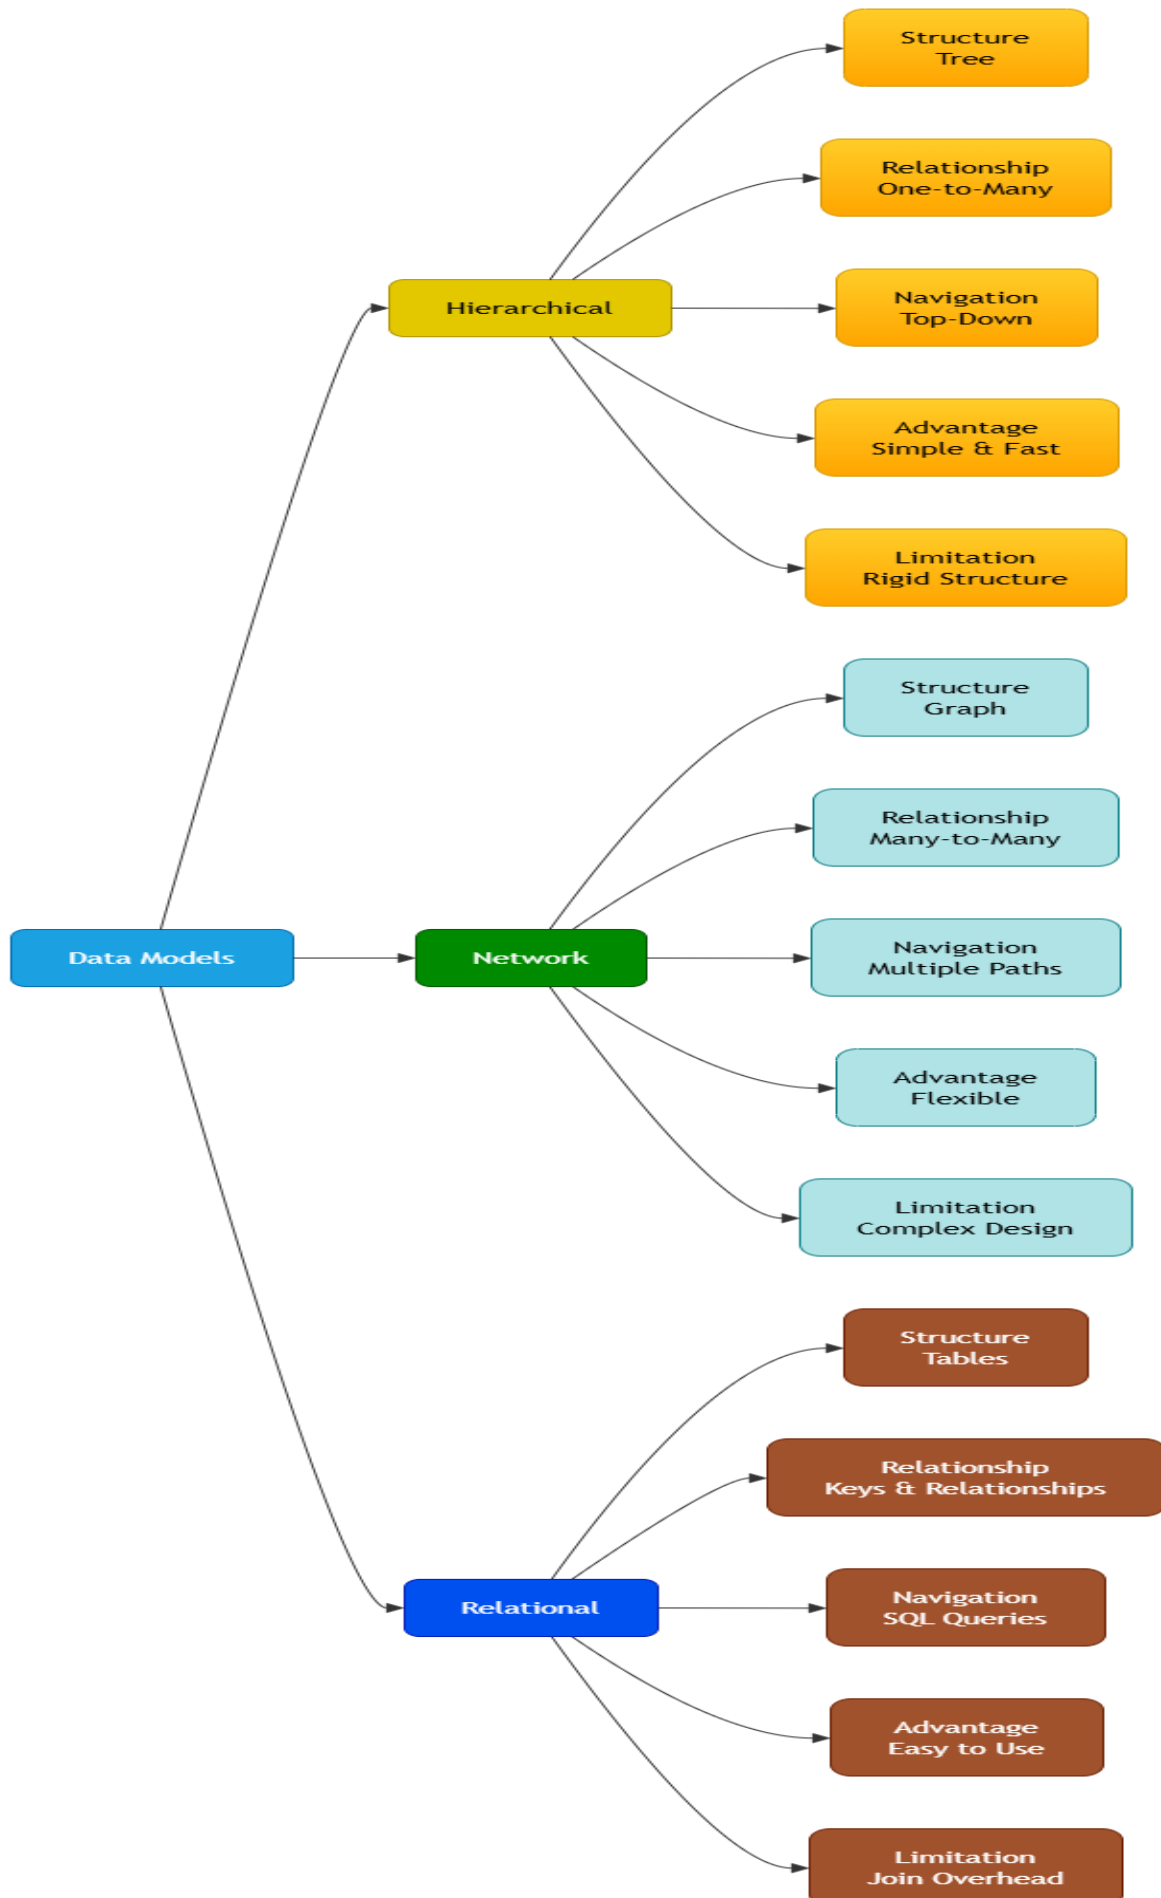

3) File-Based Systems vs Database Systems — Problems Solved by DBMS

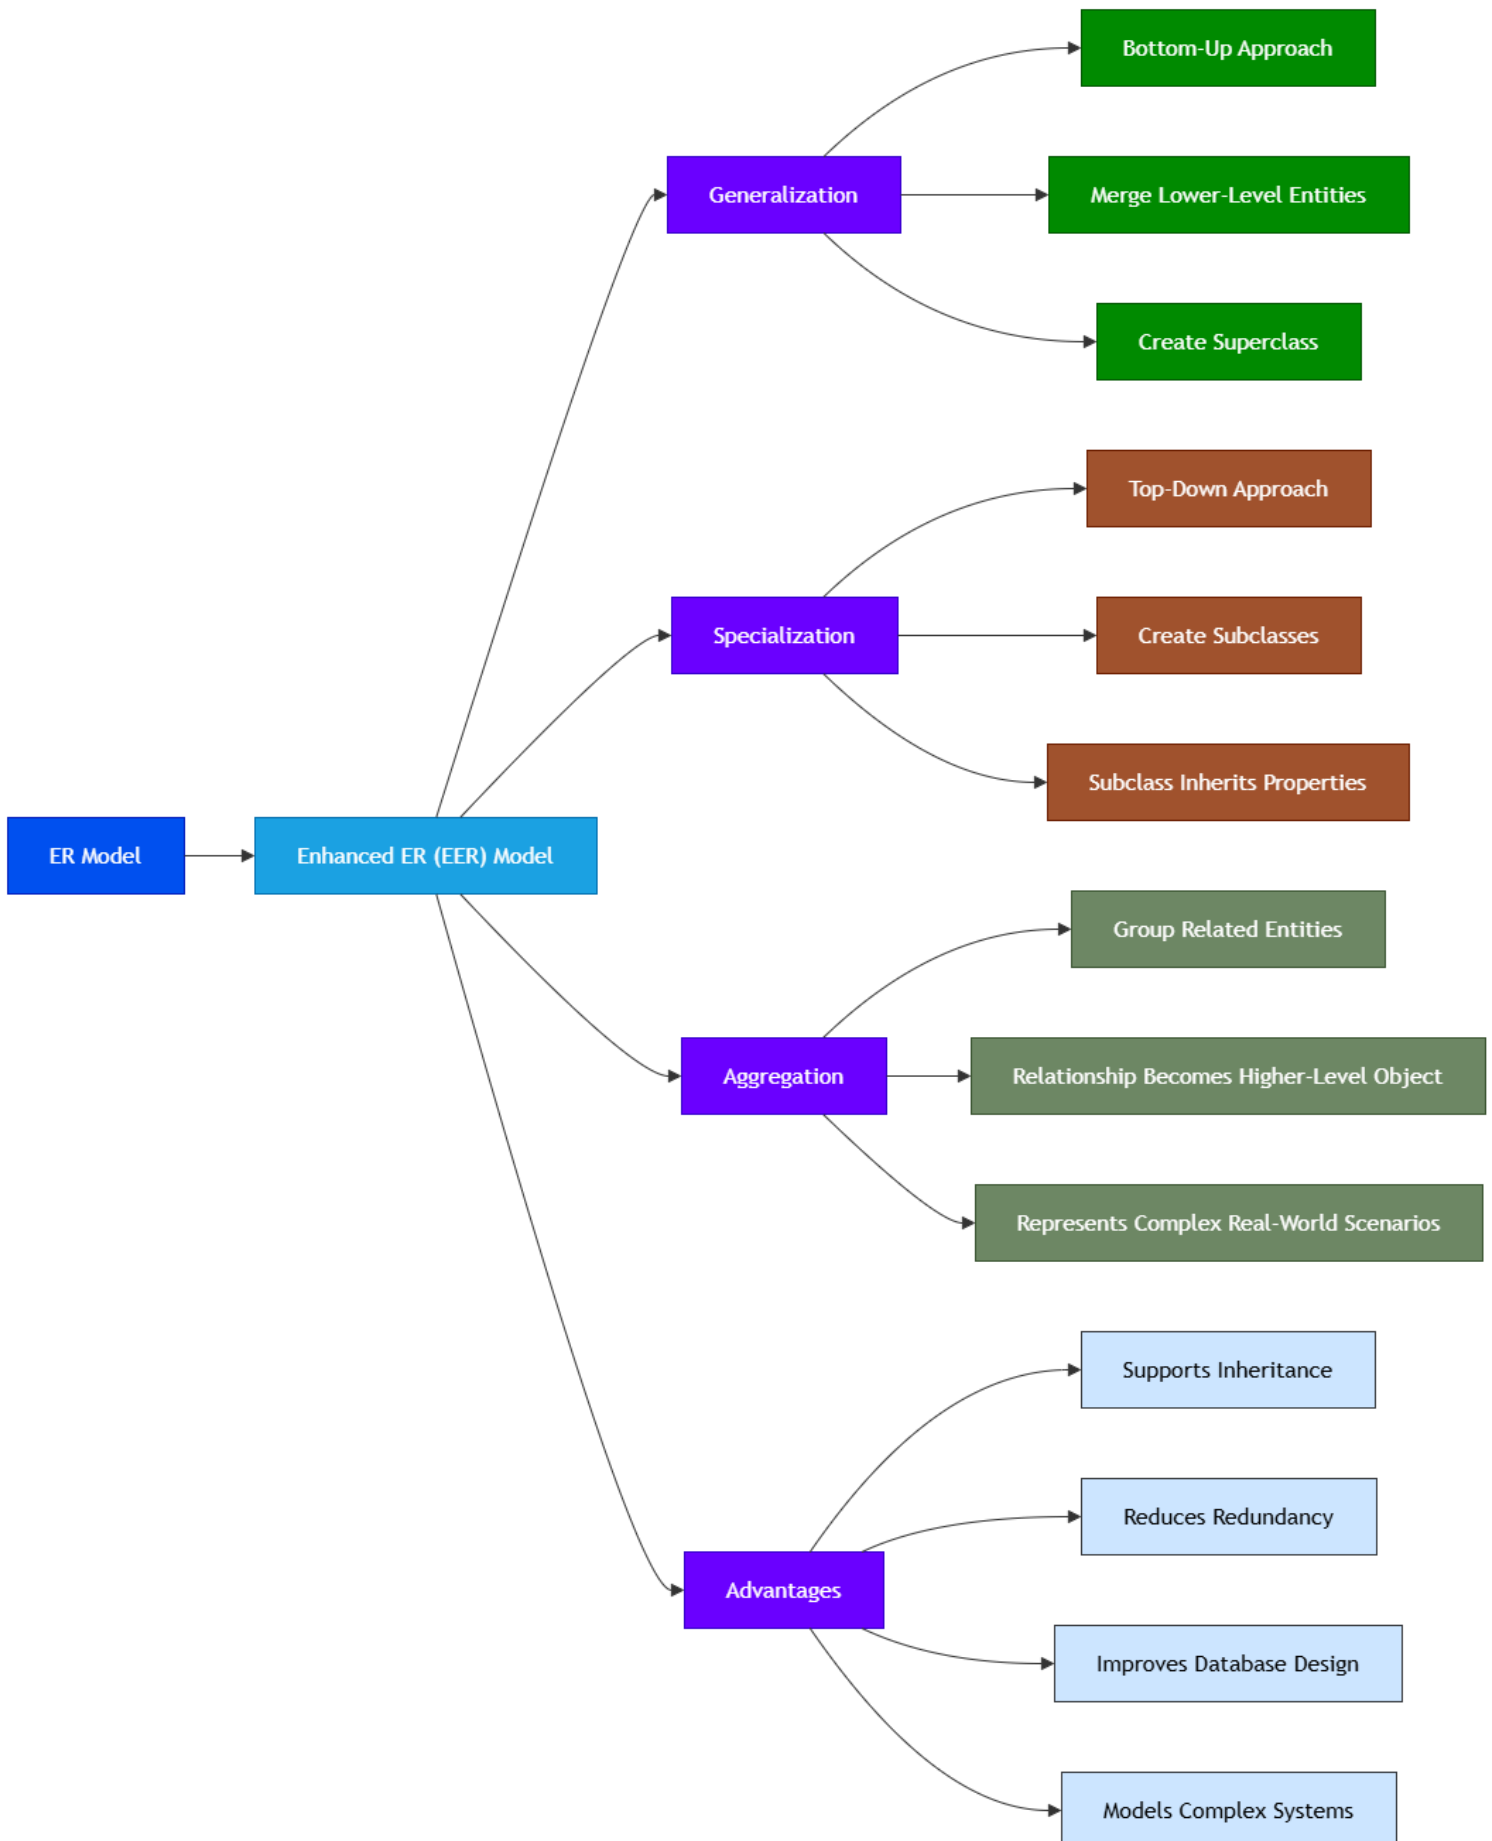

4) ER Diagram Components

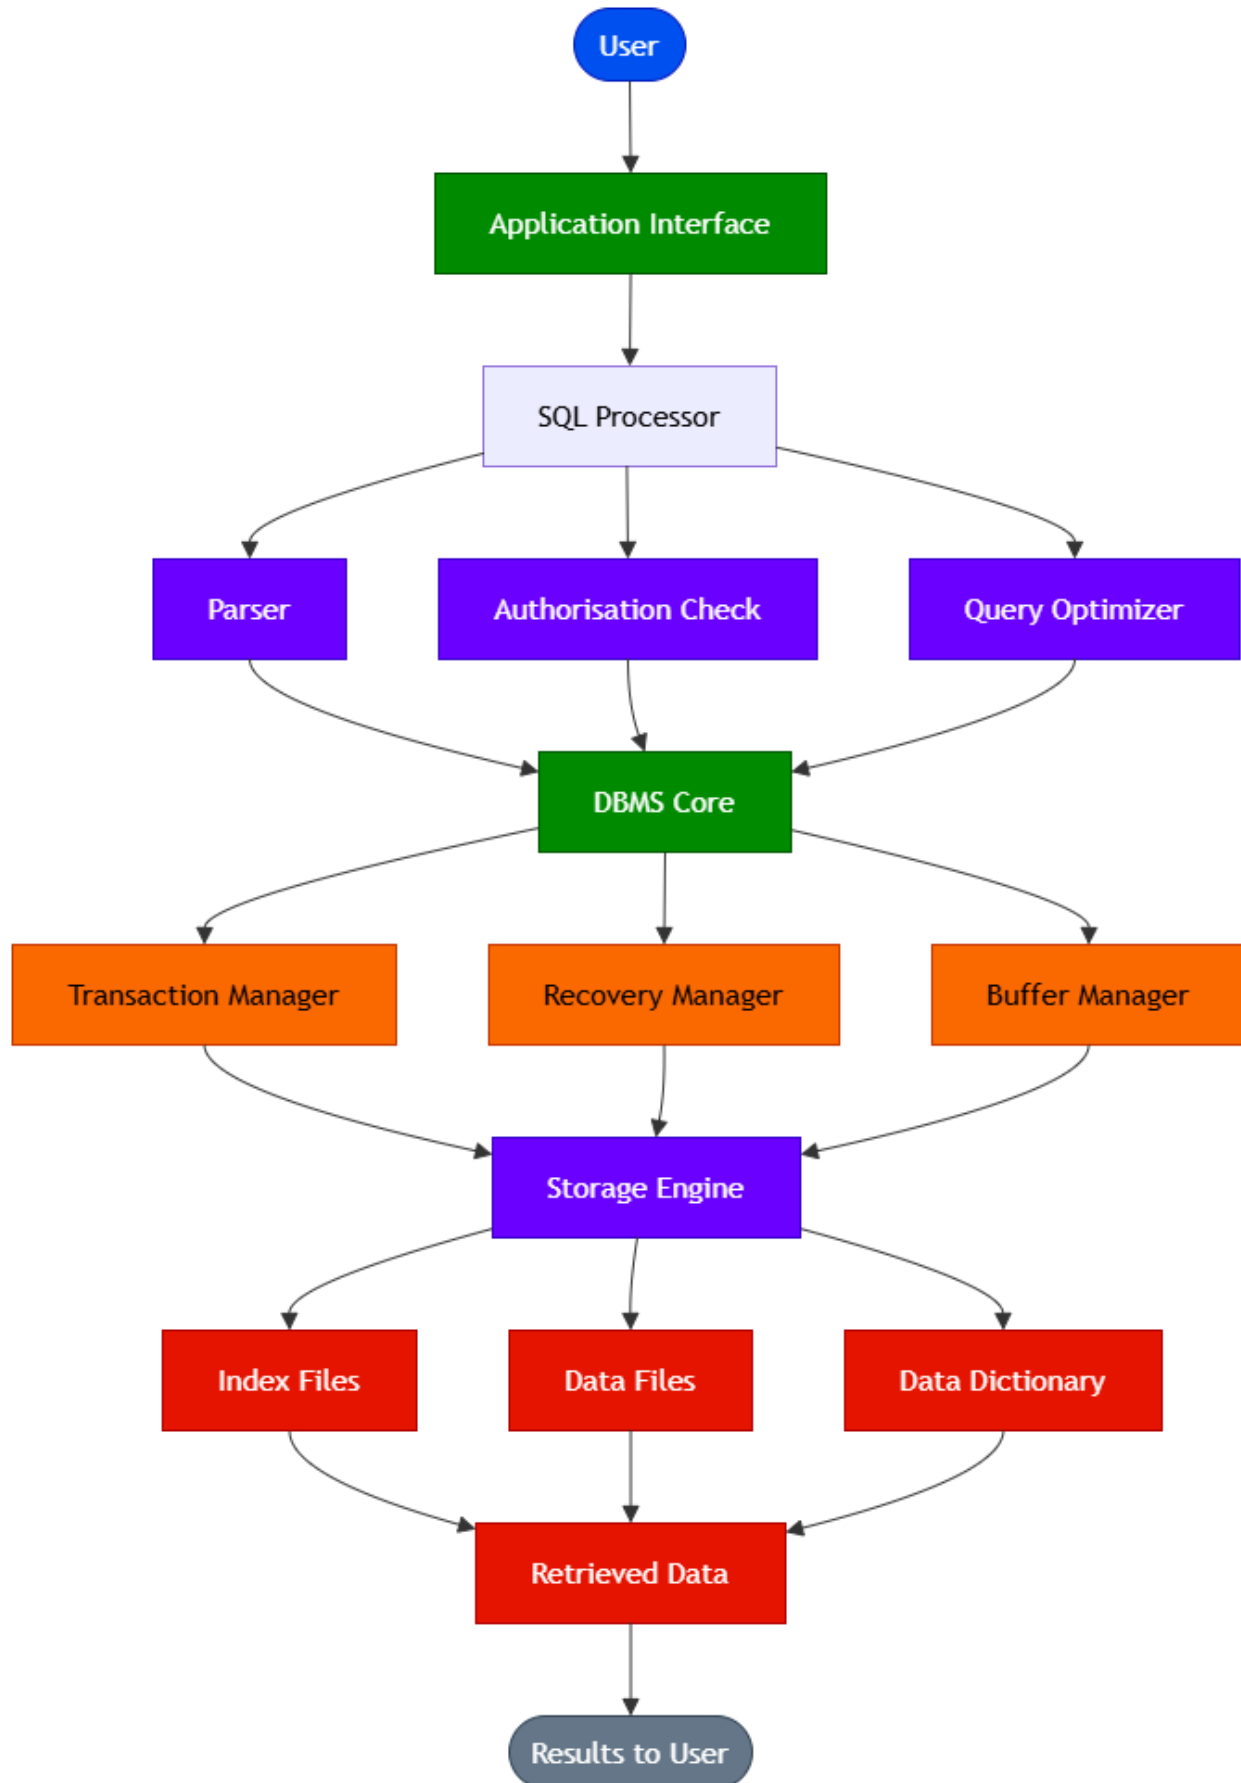

5) Hierarchical vs Network vs Relational Data Models

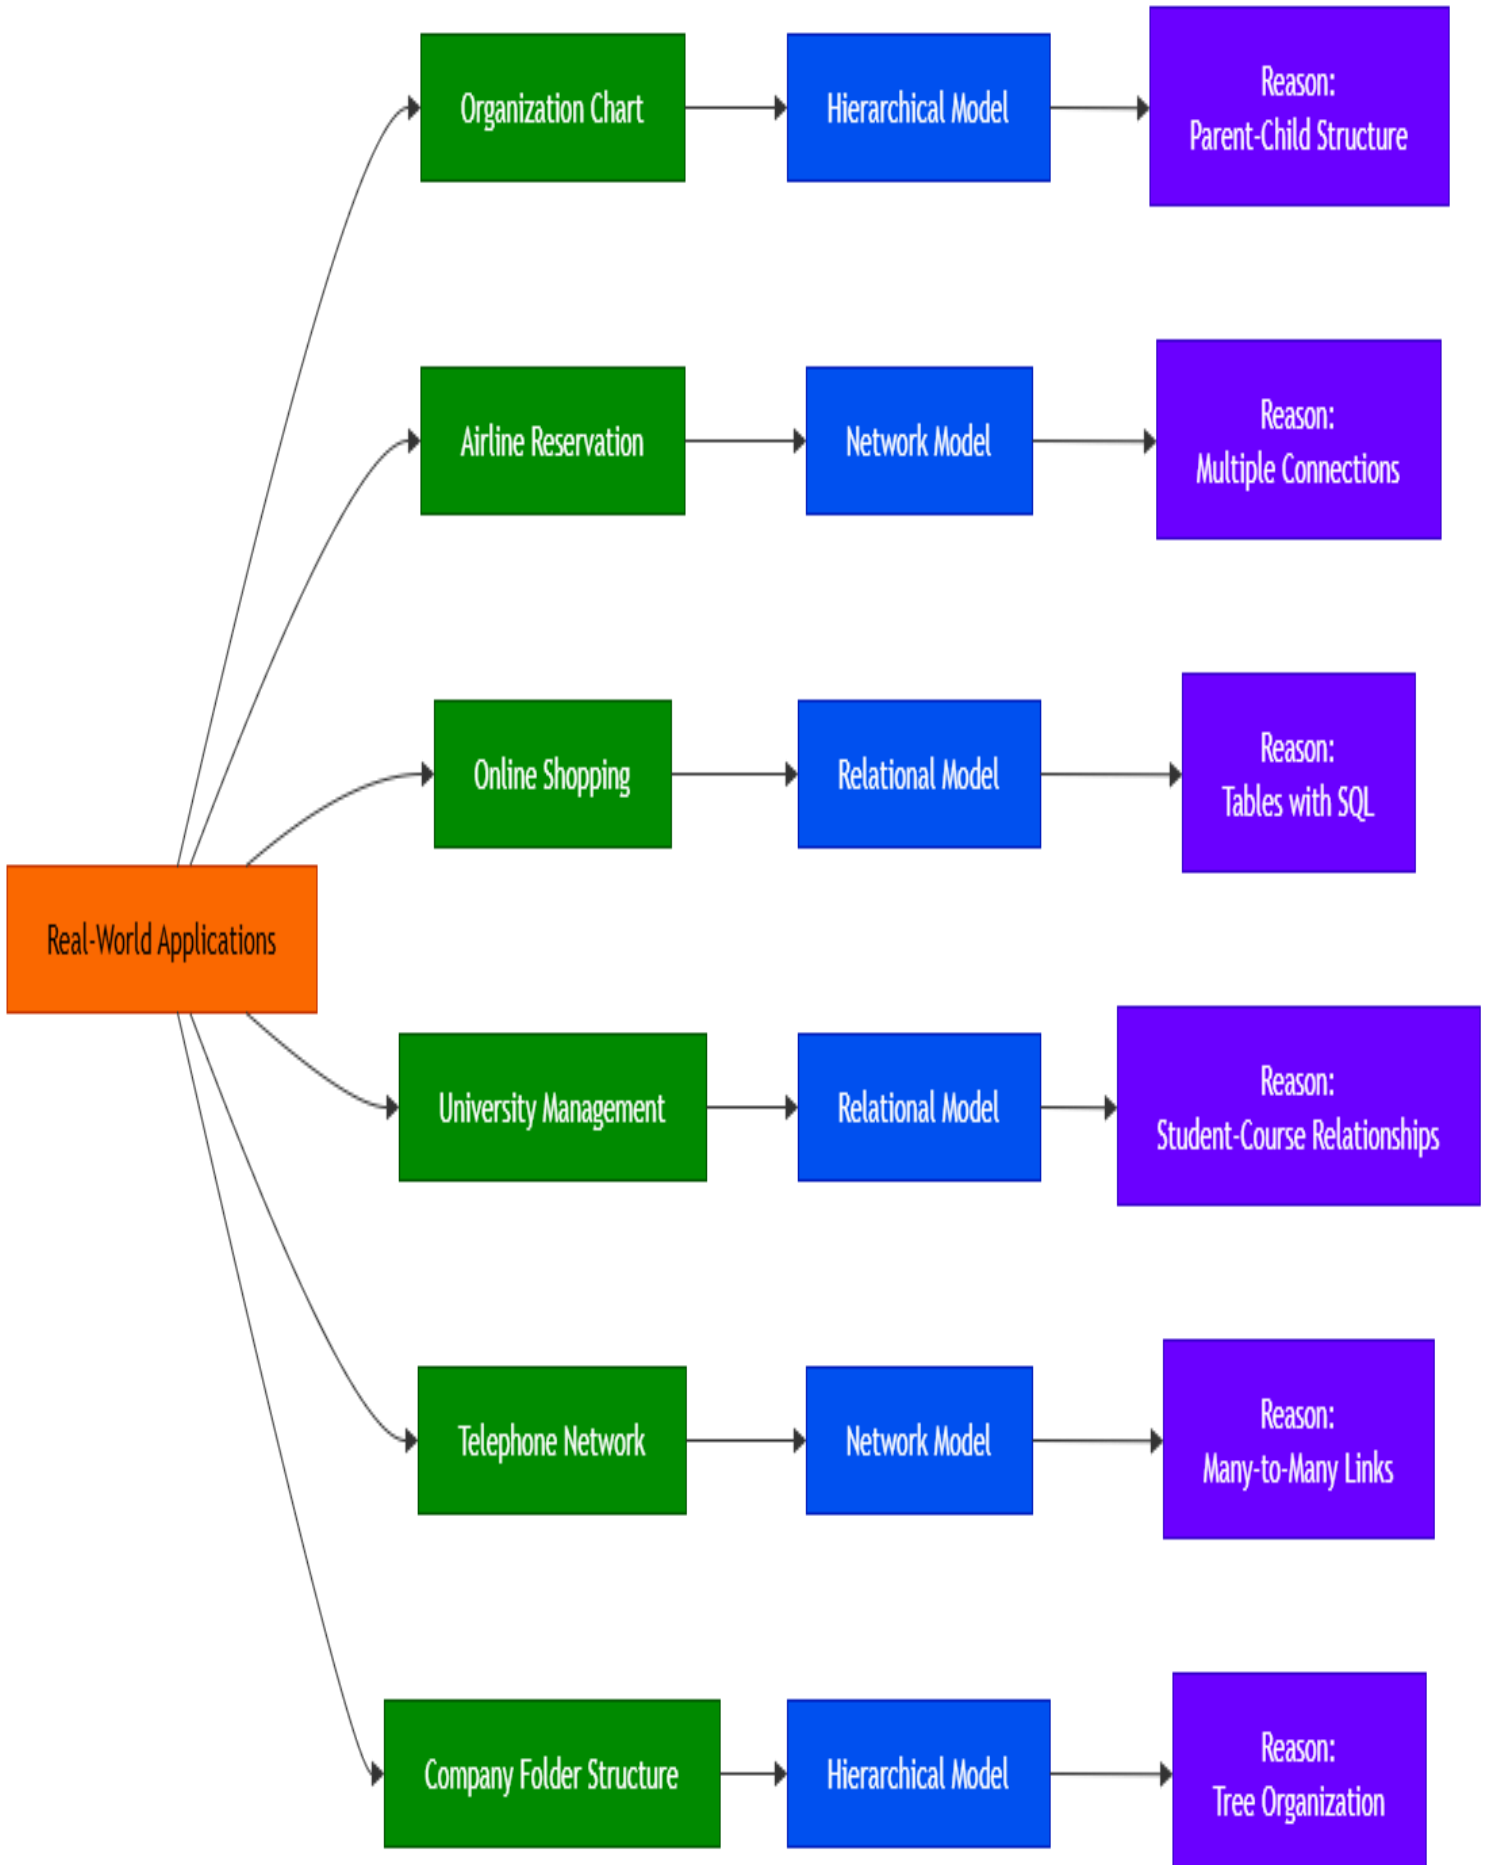

6) EER Model — Generalization, Specialization, Aggregation

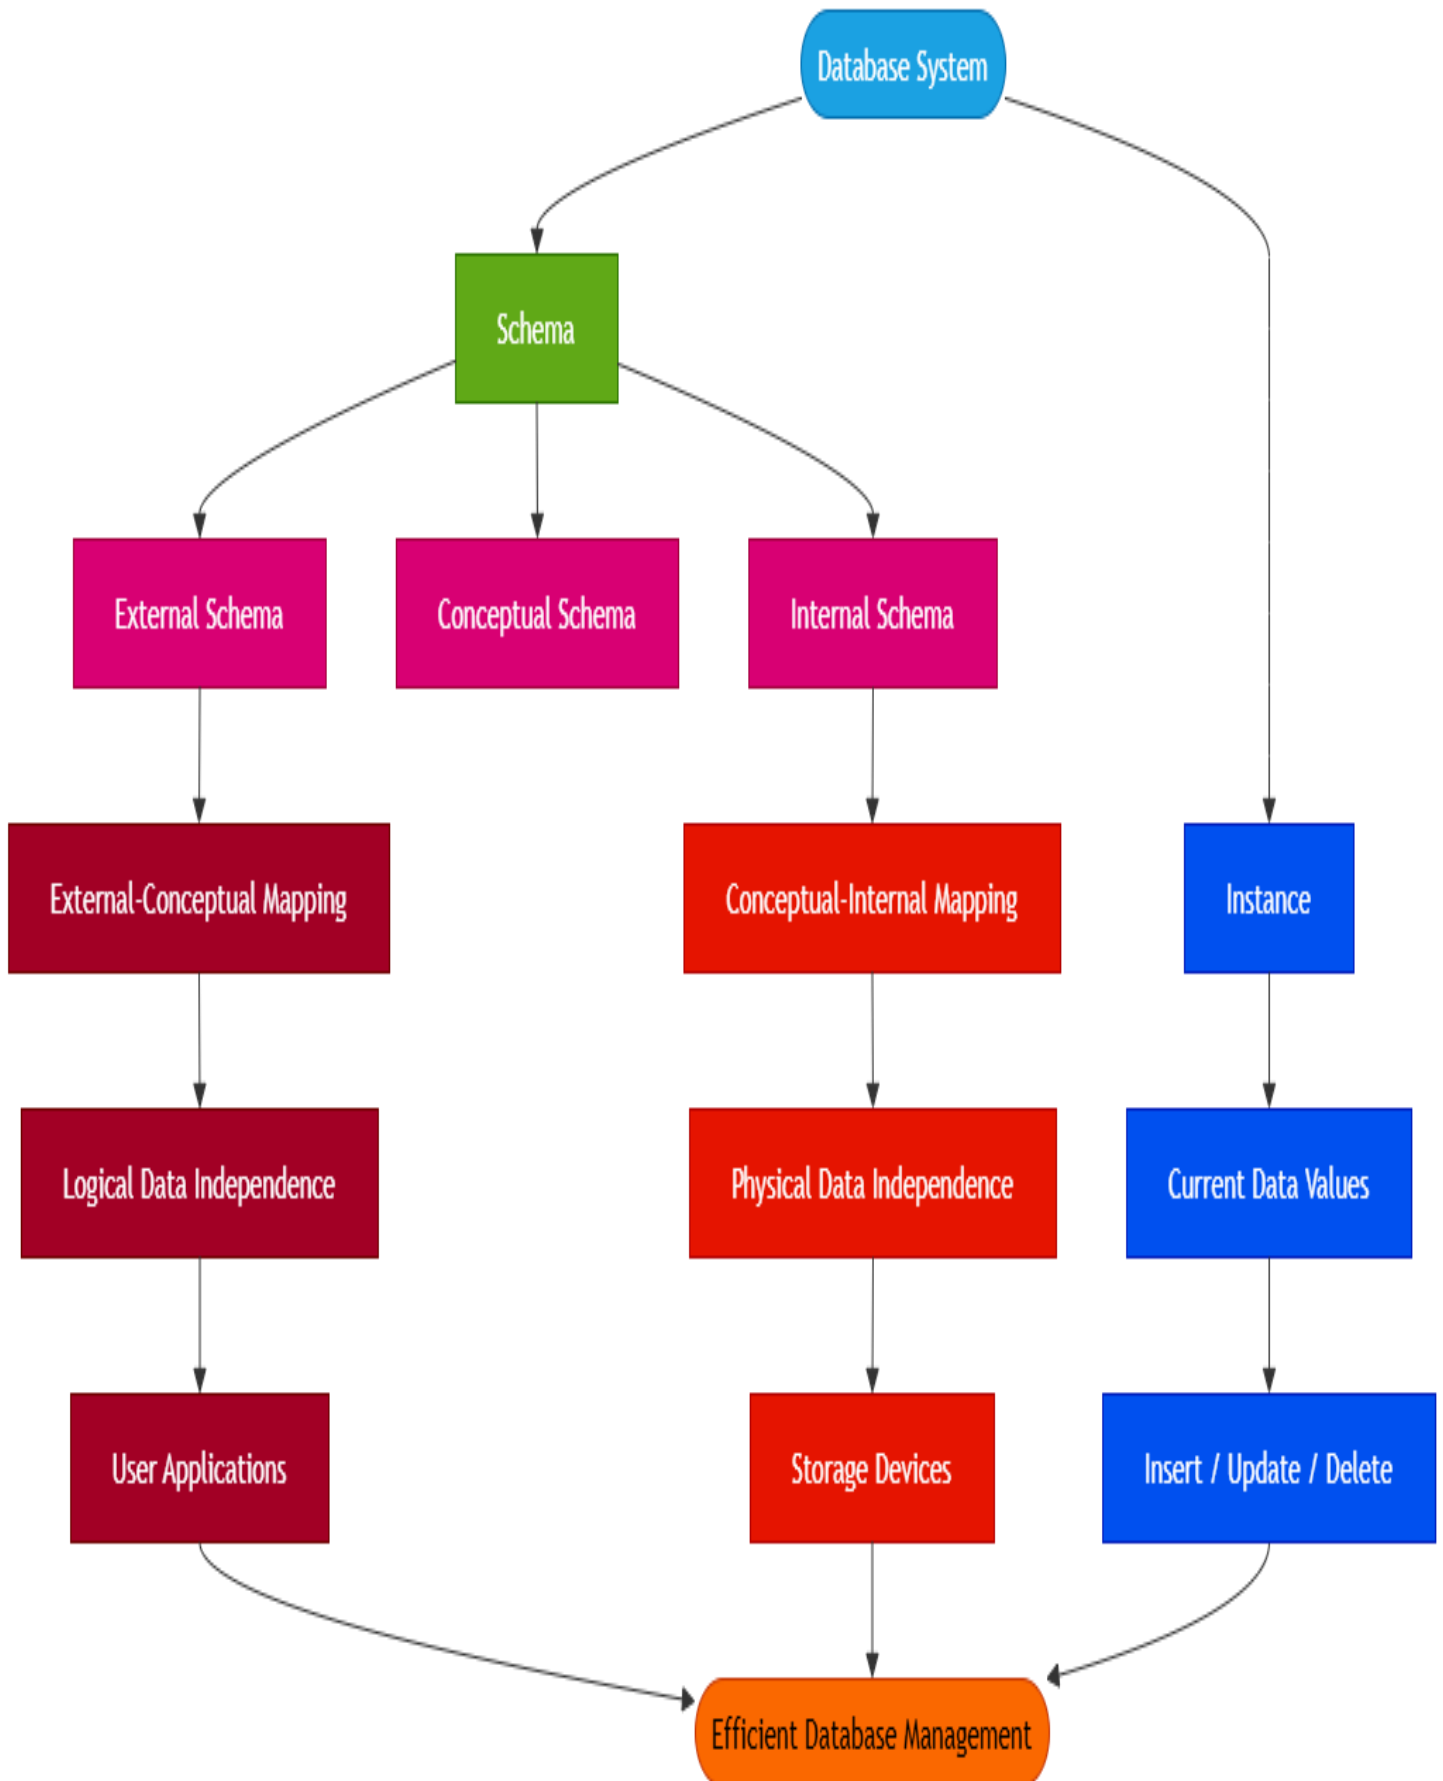

7) DBMS Software Architecture — Flow of a User Request

8) Data Models Mapped to Real-World Applications

9) Schemas & Instances → Physical / Logical Data Independence

10) Roles & Responsibilities in a DBMS Environment
